

Advanced Threat Protection (ATP)

Comprehensive Cybersecurity Products and Services

SageNet Advanced Threat Protection (ATP) (formerly known as Unified Threat Management) offers comprehensive network security without the complexity and costs of a pieced-together in-house approach. Our complete ATP solutions deliver advanced features like Content Filtering, Intrusion Prevention Service (IPS), Anti-Virus, and Anti-Spam services, with a management portal that puts network security status safely at your fingertips.

Our ATP solutions are quick to deploy, easy to manage and a snap to maintain, providing unified coverage for your users no matter where they are... all at a significantly lower Total Cost of Ownership than improvised solutions.

End-to-End Cybersecurity

SageNet offers both CPE-based and Cloud-based ATP solutions offering comprehensive protection. Both CPE-based and Cloud-based offer end-to-end network security. SageNet cloud-based ATP services offer the added advantage of eliminating the need to buy, install, and manage ATP-capable devices in your network. This approach can reduce the CapEx and expertise needed from your side to offer essential security services to all your users, no matter where they are located.

Anti-Virus

The Anti-Virus service helps protect your network from content based threats such as viruses, spyware, and other malware by using signature-based and heuristic-based detection techniques. Features include:

- Anti-Virus and Anti-Spyware service delivered from the network core protects from external and internal attacks
- Multi-layered, real-time protection against known threats and rapid response for evolving virus, spyware, and malware attacks
- Automatic updates of antivirus signatures as and when they become available

ATP Benefits

- Threat protection and prevention always up-to-date
- Significantly lower TCO compared to in-house approach
- Essential part of PCI 3.0 compliance
- Easy, centralized management of security policies
- Reduces burden on in-house staff to become security experts

Centralized Management and Analysis

SageNet ATP provides a single-pane-of-glass management enabling global policy enforcement across 5 or 5,000 devices, increased flexibility with granular role-based administration and simplified configuration of Firewall, IPS, Application Control and other protections

Anti-Spam

The Anti-Spam service protects your network from email attacks and infection by detecting known spam IP addresses and matching static spam rules such as URLs filters, spam email addresses and spam checksums.

IPS/IDS Protection

The IPS functionality protects remote sites by stopping malware before it gets into your network. By utilizing a threat database of several thousand known threats, the IPS service helps stop attacks that evade conventional firewall defenses.

- Anomaly-based detection to recognize threats for which no signature has yet been developed
- Centralized management, reporting and logging capabilities for auditing and forensic analysis.

Data Leak Protection (DLP)

SageNet DLP identifies sensitive information and blocks transmission to points outside of your network perimeter. A sophisticated pattern-matching engine monitors traffic from multiple applications, such as Web-based email and encrypted instant messaging, and provides audit trails to aid in policy compliance. A wide range of configurable options log, block and archive data, as well as ban or quarantine rogue users.

Content Filtering

The Content Filtering service helps you limit your users' access to inappropriate sites on the web. The service is constantly updated with URLs and IP addresses of websites that host malware and other harmful content. Additionally, the URLs are classified into web categories such as "Security Risk", "Controversial", etc., thereby helping you control (allow or disallow) internet access, based on web categories.
